Drought? Despite a wet spring, much of the England is in drought and likely to remain so for the remainder of 2012. We can help with alternative water supply strategies.

Cost? Borehole construction ROI is typically 2—5 years. Start the process with a borehole viability report, starting at a discounted rate of £450

Water Management

We are an independent consultancy specialising in all areas of water management and treatment. We provide pragmatic technical services based on 30 years experience working with water throughout the UK—and far beyond!

We're not tied to any product or service provider; our unbiased advice provides you with the right technology - at the right price.

Ask us how we can help you. Our staff and associates are amongst the most experienced in the UK. We listen to your needs—and then provide you with pragmatic answers and money-saving strategies.

- Borehole water supplies; from viability to construction
- Water consumption minimisation
- Water and Wastewater treatment
- Management and refurbishment of existing borehole assets
- Risk assessment for Private Water Supplies
- Water quality advice for Bottling, Food and Leisure uses
- Rainwater harvesting and water re-use

The basis of our success has been in forming long term partnerships with clients in many sectors including industry, leisure, Spas, energy, food & drink, estate management, sports and agriculture

Effective management of water and energy resources are vital to success in all areas of business. We are unique in our ability to combine our Water management expertise with extensive knowledge of Energy auditing and understanding of Renewable Energy technologies - all key areas for saving money!

Regulatory issues can be an expensive *headache* if you don't have the time or expertise to deal with their impact on your business. We are here to help you—backed by many years negotiating on behalf of our client's interests.

'If water is an issue, we are here to help'.

Case study

Lydney Estate, Gloucestershire

Water supply Risk assessment and Borehole construction.

The Estate is fed by a private water supply consisting of several constructed springs. A new borehole has been added to augment the Estate supply

'Carbon Zero Consulting carried out a thorough review of an extensive private water supply network, testing the water quality, identifying areas for improvement, recommending appropriate remedial works and eventually completing a risk assessment as required by the District Council to comply with the Private Water Supply Regulations.

Carbon Zero Consulting provide a thorough, professional service. They dealt with all aspects of commissioning a borehole from reviewing the viability of the site, obtaining any necessary consents, identifying an appropriate contractor, supervising the works and full testing of the supply once the borehole was successfully commissioned'

**Robert Frankton, Partner,
Smiths Gore**

Case study

Nirvana Spa, Wokingham

Borehole viability assessment, design and construction, water treatment and asset management;

'Ten years ago, Nirvana Spa; The UK's leading day Spa, replaced its mains water supply with groundwater taken from boreholes designed by John. The borehole system has paid for itself many times over and the quality of water for bathing, drinking and spa treatments is an ongoing pleasure for all guests. The borehole not only saves money but also saves energy and adds to the sustainability of the spa by using water produced on-site rather than from a remote treatment plant.

Water is taken from the chalk aquifer at a depth of over 100m providing a long term, safe source of 'mineral' water. Nirvana has a licence to abstract 100% of their daily water requirement meaning freedom from the impact of water company price hikes and drought orders! There is even future potential to use the borehole water supply for a renewable energy heating system—saving more money and reducing carbon emissions.'

Sean Barley, MD Nirvana Spa
